

# VIKING MACS

## Personalize your Gear More Than Ever Before

### Introducing MACS - the Multi Attachment Configuration System

VIKING MACS has a modular, adjustment system allowing you to place your pockets and accessories right where you want them. Easily accessible and don't interfere with other equipment.

That's not the only news. Extra stretch material under the arms, pre-bent elbows and knees and detachable internal kneepads are all a part of the ergonomic design for maximum freedom of movement and a new level of comfort.

Adjust your pockets anytime  
- exactly where you need them!

We also offer a classic fixed pocket  
model without the webbed loops.

# VIKING MACS

**PARTX™**

Also available with optional PartX™ Particle Protection features such as cuffs with special closures and extra protection at the waist.

## Detachable Outer Shell to Minimize Exposure to Potentially Harmful Particles

The jacket and pant have an outer shell that can be detached from the liner with a zipper. Before entering into the fire truck, you simply unzip the contaminated outer shell and place in a dissolvable washing bag.

The inner liner will continue to protect you against wind and weather. Upon arrival at the fire house, throw the bag into the washing machine. You then zip on your clean spare outer shell, and you are back in service, thereby helping to prevent dangerous particles from contaminating you and your surroundings.

## Features
