

# VIKING MACS

Personalize  
your Gear More  
Than Ever Before

Approved according to the latest NFPA standards

# Turnout Gear That's Got Your Back!

The increased cancer risk among firefighters is a major concern all over the world - and when you are out on a call, your turnout gear is often exposed to dangerous particles.

VIKING has developed and tested a tactical solution for the next generation of protection. With our new MACS gear, you remove the contaminated outer shell after exposure at an incident, leaving the liner as a wearable and weather protective suit for the road home.

No corners are cut with the VIKING MACS - from the uniquely flexible design to the intelligent use of high-end materials. The strategy behind this approach not only provides extra protection but also extends the lifetime of the gear.

***"The unique VIKING MACS - offers maximum flexibility while reducing your exposure to dangerous particles!"***

## How It Works

The outer shell of the coat and pants are attached to the liner with a zipper system. Before boarding the fire truck, simply unzip the outer shell and place it in a dissolvable washing bag.

When back at the station, throw the bag in the washing machine. This helps reduce your exposure to dangerous particles and prevents them from contaminating your body, the truck, the station and the people handling the suits for washing.

# Detachable Outer Shell

## Maximizing Protection

The outer shell of the VIKING MACS is made of inherently fire protective and thermally stable Nomex® IQ and PBI Max™. These extremely strong and durable materials offer great comfort and are proven to maintain their resilient structure after many washes.

Underneath the outer shell is a GORE® CROSSTECH® Black moisture barrier which doesn't lose its high breathability after exposure to extreme heat, and a top of the line thermal layer.

With the outer shell removed, these inner layers continue to protect the wearer from the elements as well as the most common dangerous chemicals according to NFPA 1971 standards including blood, bodily fluids and petroleum products.

## Maximizing Comfort

Extra stretch material under the arms, pre-bent elbows and knees, and removable internal knee pads are all a part of the ergonomic and adaptable design for maximum freedom of movement, easy donning and a new level of comfort.

## Maximizing Durability

The highly durable outer shell is reinforced with Para Aramid from the elbow to the sleeve, on the knees, in the pockets, and at the hem.

The innovative multi-piece design also allows you to easily inspect your gear and replace a defective or worn layer, rather than discard the entire suit.

## Maximizing Flexibility

**Personalize your gear like never before!**

Inspired by the flexibility of modern combat gear, VIKING MACS has a modular personalization system of webbed loops, allowing you to place pockets, pouches or other accessories right where you want them.

Simply pull the straps through the loops and attach with a snap! The system ensures that your personal features and accessories sit tightly and securely where they don't restrict your freedom of movement or interfere with other equipment.

*We also offer a classic fixed pocket model without the webbed loops.*

# VIKING MACS

## Coat PS1111

- On-scene detachable outer shell
- Adjustable collar
- Pockets: two radio pockets (1 adjustable), two 7" x 9" lower side box pockets, two hand warmer pockets with zipper, one inner pocket, one pocket under storm flap
- Reinforcements: cuff and elbow area reinforced with Para Aramid
- Extra flexibility: special hem cut and stretch material under arms for enhanced movability, pre-bent elbows, top quality wristlets with thumbhole and two-way stretch made of DuPont™ Nomex®
- Straps: Light strap on center front flap, mic strap on throat flap, glove/utility strap
